

**Experiment 1****Student Name: Tanmaya Kumar Pani****UID: 22BCS12986****Branch: BE-CSE****Section/Group: KRG-IOT-1-B****Semester: 6<sup>th</sup>****Date of Performance: 11/01/25****Subject Name: Foundation of Cloud****Subject Code: 22CSP-367****IoT Edge ML Lab****1. Aim:**

Install VirtualBox or VMware Workstation on any operating system and set up various flavors of Linux or Windows as virtual machines.

**2. Objective:**

The objective is to create a virtualized environment for testing, learning, and development by installing and configuring multiple operating systems on VirtualBox or VMware Workstation.

**3. Procedure:**

- VirtualBox enables flexible virtualization, running multiple independent operating systems simultaneously.
- The hypervisor operates as a Ring 0 kernel service, managing memory, guest context, and hypervisor modules.
- Interrupts are handled by switching execution to another OS using VT-x/AMD-V, with the host scheduling guest processes.
- Device drivers allow guests to access host resources like disks and network controllers.
- Support processes like VBoxSVC run automatically to manage guest VMs launched via the VirtualBox GUI

## 4. Steps to install Virtual Box:

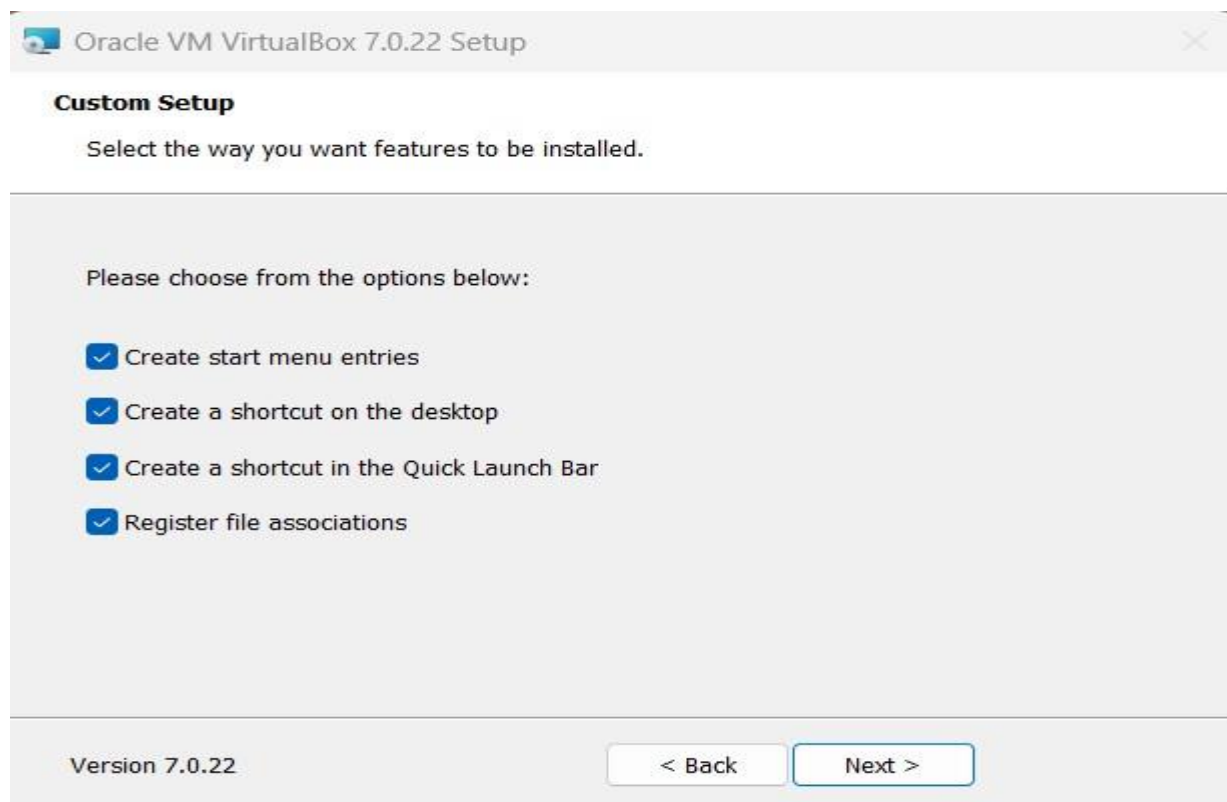

- Download the virtual box exe and click the exe file and select next button

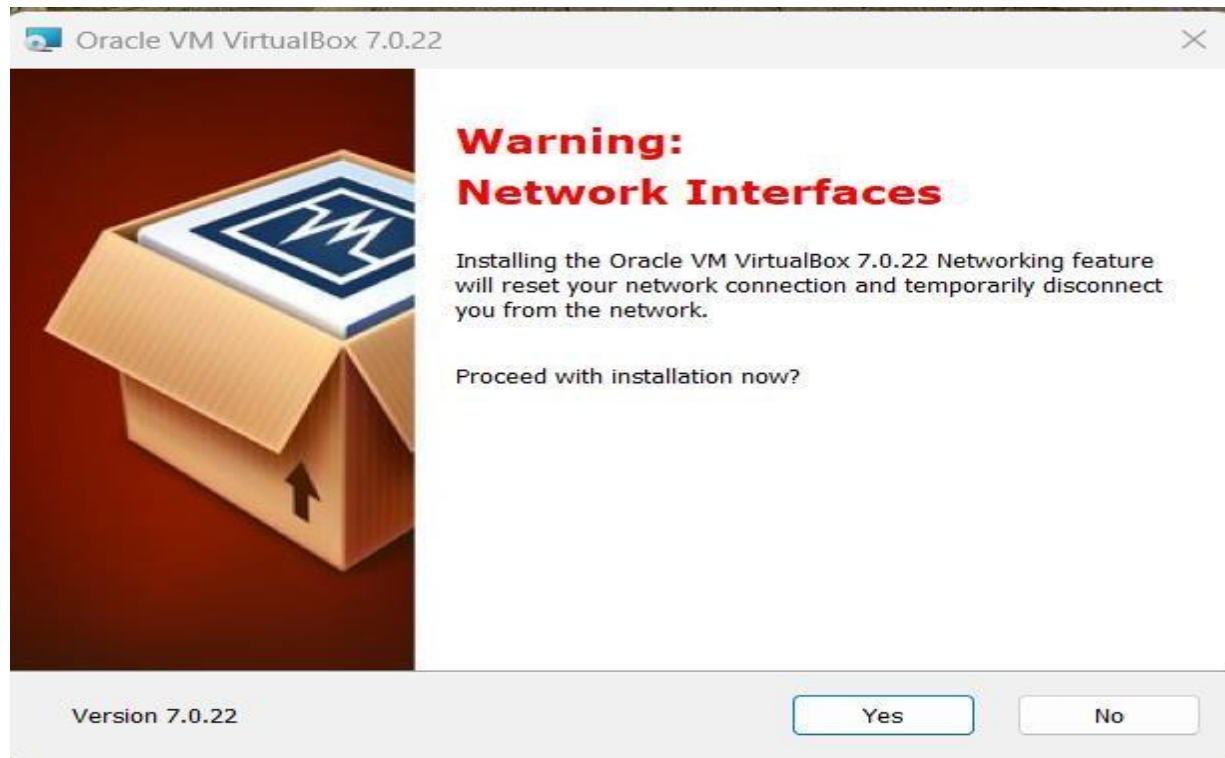

- Click the next button

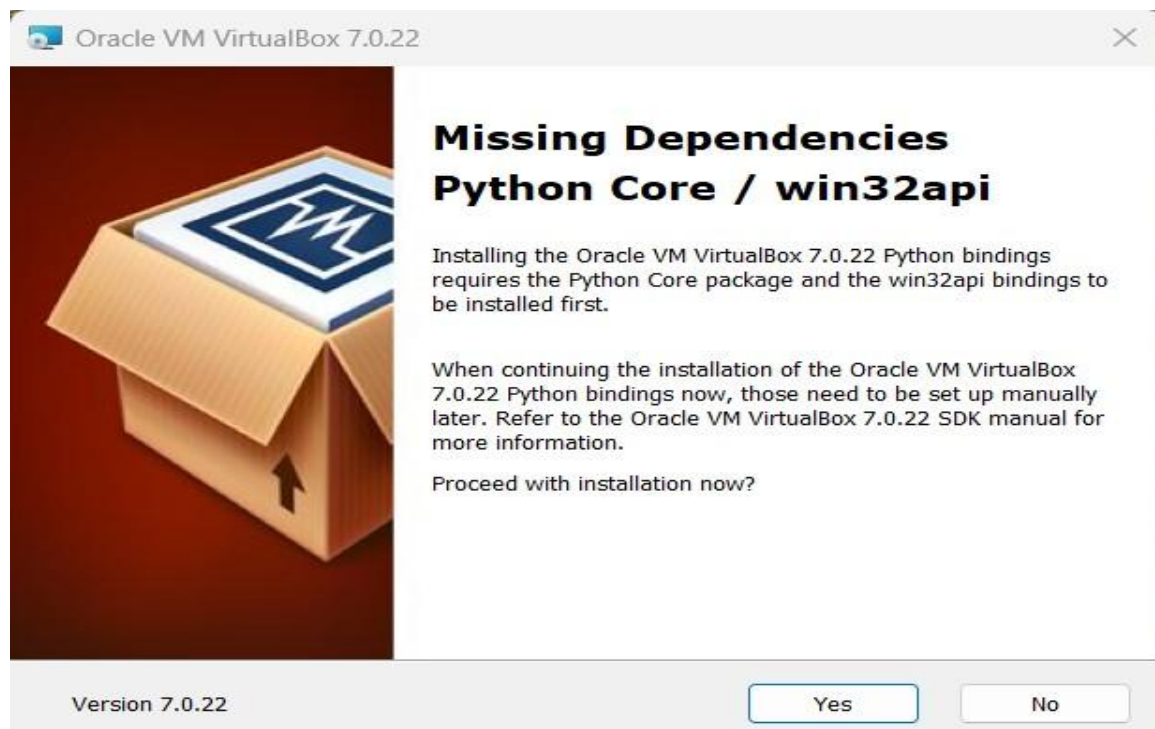

- Click the next button

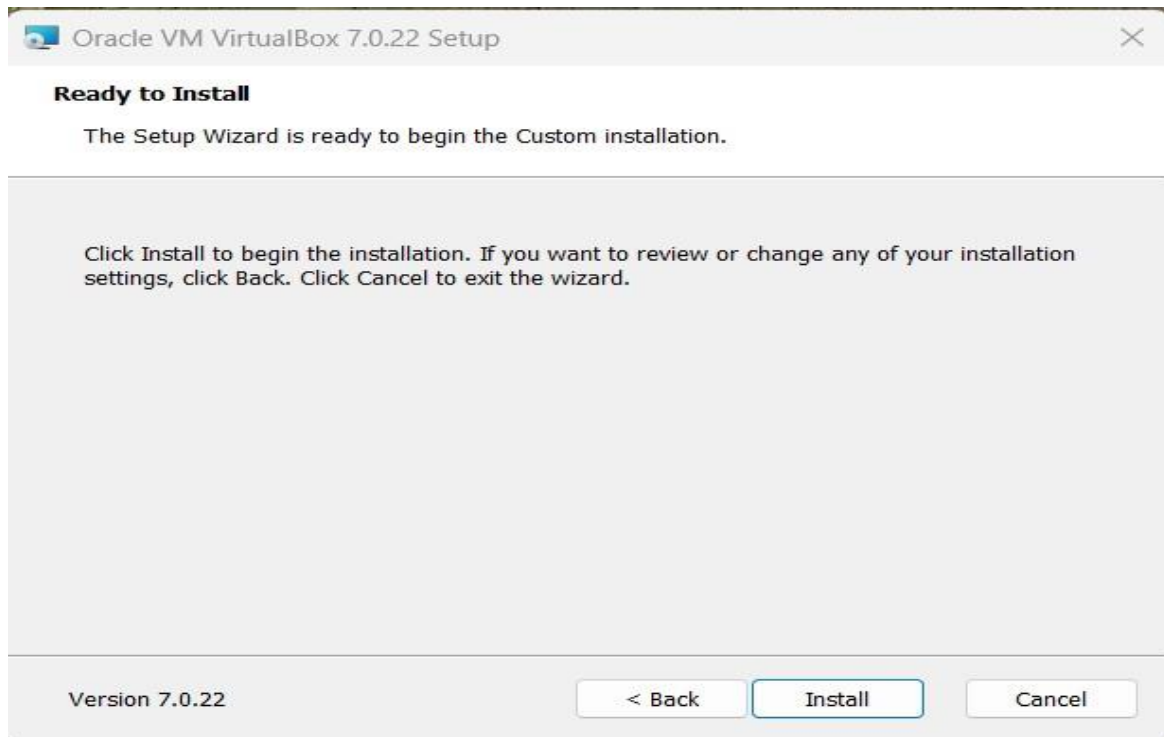

- Click the yes button

- Click the yes button

- Click the install button

- Click the finish button

- Virtual Box icon is visible on desktop now installation is completed.

## 5. Output:

**DEPARTMENT OF**

Discover. Learn. Empower.

## **COMPUTER SCIENCE & ENGINEERING**

### **6. Learning Outcome:**

- Learn how to install VirtualBox or VMware Workstation on your computer.
- Acquire the skills to create, configure, and manage a virtual machine.
- Familiarize yourself with virtual hardware components, including virtual CPUs, RAM, disks, and network adapters.
- Practice installing different operating systems (Linux/Windows) on virtual machines.
- Understand what virtualization is and how it allows running multiple operating systems on a single physical machine.
